
PRODUCT CARE FACTSHEET:

Guidelines for the care and cleaning of mirrors

Introduction

Many people are unaware of how to properly care for and clean the mirrors in their homes and offices. Many cleaning products make claims to be the best for mirrors. The truth is the care and cleaning of mirrors is simple and inexpensive.

Care should always be taken to avoid getting the edges of the mirror wet with any liquid or substance. This can result in damage to the mirror edges, commonly called "black edge". Should mirror edges become wet, they should be dried off immediately.

Cleaning of mirror surfaces

The following are recommendations on the best cleaning practices of mirrors

- The very best and safest cleaner for a mirror is clean, warm water with a soft, lint free cloth. Wring all water from the cloth before wiping the mirror. Dry the mirror immediately with a dry-lint free cloth.
- **DON'T** use acid or alkaline cleaners for mirror clean up after installation. Either substance can attack the front surface and edges as well as the backing of the mirror. No abrasive cleaners should ever be used on any mirror surface.
- **DON'T** spray cleaners directly on the mirror. Always apply cleaner directly to a soft, lint free cloth and then wipe the mirror. This will prevent the cleaner from contacting the edges of the mirror and damaging them.

- **DON'T** clean across the face of multiple mirrors at the same time. When cleaning several mirrors installed on a wall, wipe the joints in the same direction as the joints. This will keep the cleaner from collecting in the area where the mirrors join.
- **DON'T** use commercial mirror cleaners that contain ammonia or vinegar.
- **DO** use 0000 oil-free steel wool, not solvents, to remove surface marks or stubborn dirt. Use of solvents can attack and damage the edges and backing of mirrors.
- **DO** use soft, lint and grit free cloths to clean a mirror. This reduces the chance of scratching the mirror surface.
- **DO** make sure all joints and edges are dry so that no liquid or cleaner comes into contact with the edges and backing.

Storage & Installation Conditions

Mirrors should be stored in a dry, well ventilated area, free of chemical fumes and away from high heat sources such as steam or water pipes. Exposure to excessive moisture or harmful construction materials can result in hard to remove surface conditions.

Mirrors should be the last materials to be installed. Care needs to be taken that sprayed material such as wall texture or adhesives for wall covering have completely cured before mirror installation. If conditions are found that cannot be cleaned using the above procedures, contact the mirror supplier for guidelines for construction debris removal.
